

**WE SENSE DISASTER...  
AND NOW YOU ARE IN CONTROL...**

## sensorArray Pro

### APPLICATIONS

- Computer Room Monitoring
- Telecommunication Room
- Network Equipments Monitoring
- Remote ATM Monitoring
- Rackmount monitoring
- Air Conditioner Monitoring
- Cold Storage
- Warehouse
- Medical Laboratory

Maintaining your infrastructure keeping you on the edge?  
Is your infrastructure designed to control the unpredictable?  
You dread Investing in a monitoring device because it is exorbitant?

**We are here to understand your needs, safe guard your infrastructure and resources from external disaster.**

### Features

- Web Enabled
- Email Notification
- Full SNMP Based
- NMS Integration
- Full SMS

**And Much More...**

**No software required, just plug and start using**

**Safeguard your Critical Resources..!**

## sensorArray Pro

sensorArray Pro, is a larger version of sensorProbe with 8 ports and an additional expander card. The expander card can

accommodate up to 30 dry contacts, 4 temperature, one humidity inputs to the sensorArray. It is a simple SNMP based hardware device designed to monitor and notify changes in the environment variation for enterprise class network. You can set a threshold value against the sensors and when the threshold value is reached, the sensorArray sends an alert as Email, SMS, and SNMP. It is a plug n play device and is easy to maintain and use. The installation process is also simple. You don't require additional power supply or batteries when you add new optional sensors. You don't need to assign irq's or internal memory ports or configure the device before the sensors can function.

The sensorArray comes with one temperature sensor. However, there is a provision to add other optional sensors. You can add up to four temperature sensors, three humidity sensors, and other sensors like water detectors, security sensors, voltage sensors etc.

The sensorArray is also capable of controlling power line voltage for computers and helps in the remote monitoring of power cycle via SNMP. It also contains an SNMP controlled rs232 interface which monitors and controls remote serial interfaces like Cisco routers terminal interface and UNIX administration terminal interface.

The sensorArray can be completely integrated with Computer Associates Unicenter®, Hewlett Packard OpenView® and IBM Tivoli, WhatsUp Gold, Veritas NerveCenter. It can also be integrated with SNMP management stations that include graphing programs like MRTG.

## Features

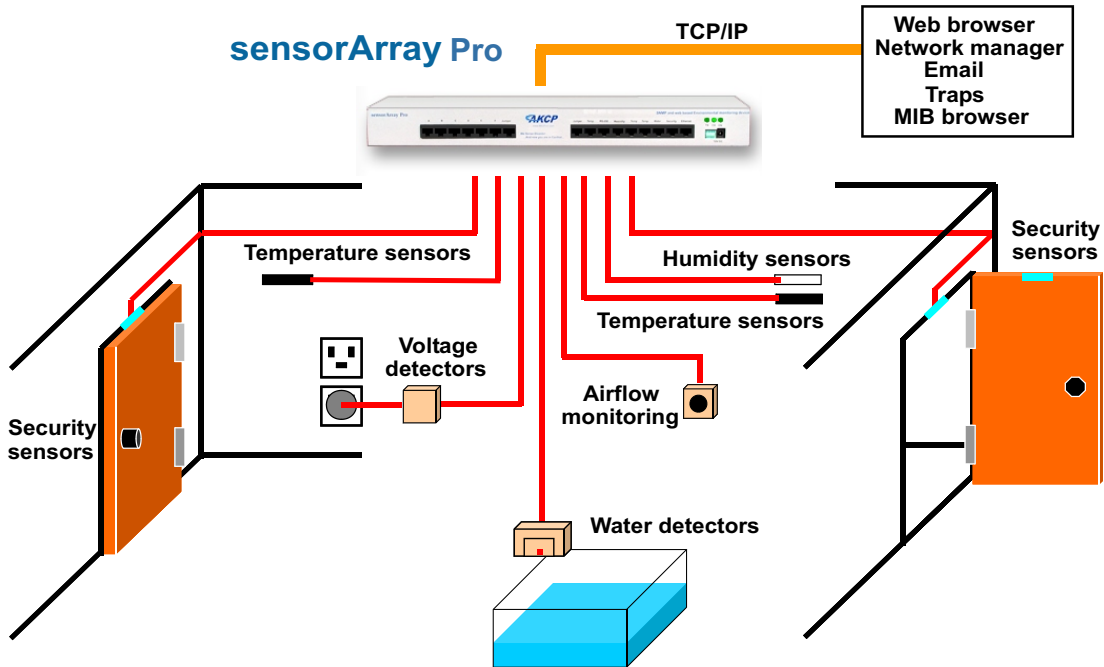

- Comes complete with snmp mib and all software
- Supports all major communications protocols
- Embedded web server allows all parameters to be easily configured
- Full SNMP compliance
- Includes SNMP mib
- Includes SNMP utilities for setting and getting parameters.  
Example programs to read and control the sensorArray
- Supports SNMP polling allowing the sensor values to be collected and graphed with host applications
- Sends traps notifications to two destinations
- Sends email notifications to two email addresses
- Sends SMS alert to mobile devices
- Email, SMS and traps include the sensor description, current sensor value
- Settable thresholds for all sensors

## Specifications

- Standard 10 Base-T ethernet Rj45
  - Designed for 1U rackmount
  - Manufactured using highly integrated, low power surface mount technology to insure long term reliability
- Benefits
- One year limited warranty
  - Unlimited lifetime support
  - Includes full, easy to understand documentation

## Benefits

- One year limited warranty
- Unlimited lifetime support
- Includes full, easy to understand documentation
